

LIFE SAVING SOLUTIONS FOR YOUR BUSINESS

We face challenges every day: more and more data, numbers, images to be stored, organized, archived, searched, protected. Samples to be processed, lives to be saved, information to be accessed, stored, transmitted. Faster, bigger, better. Flawlessly.

CHALLENGES

People around the world are expected to make 726 billion transactions using digital payment technologies by 2020, according to a study released in 2017 by consultancy company Capgemini and bank BNP Paribas.

How many? Probably as many as the sand particles on the beach where Joe Woodland thought about the barcode concept for the first time. It's been a long journey since that day, and this progress and expansion of banking instruments, for business and individuals, in a secure environment, would not have been possible without the combination of barcode technology with computer and application software.

The evolution of the banking system as we know it, from credit loans to transactions, SWIFT code systems would have been different or even impossible without it.

Solution: ByteScout BarCode Generator and Reader SDK, Document Parser SDK

BANKING AUTOMATION

- ByteScout Barcode Generator SDK is used to add barcodes to existing documents to track electronic and printed documents later and identify relation of document to a specific customer or group of customers.
- ByteScout Barcode Reader SDK is used to automate tracking of scanned and electronic documents in pdf, images, tiff formats. Split and merge documents based on found barcodes.
- ByteScout Barcode Generator SDK to automate printing of QR Code or Code 39 / Code 128 barcodes for inventory purposes for physical goods in your office. Track them using Barcode Reader SDK via live camera, from photos, from pdf or pictures.
- Use Document Parser SDK to automate data extraction from large amount of incoming documents using easy to create and update extraction templates.
