BYTESCOUT

LIFE SAVING SOLUTIONS FOR YOUR BUSINESS

We face challenges every day: more and more data, numbers, images to be stored, organized, archived, searched, protected. Samples to be processed, lives to be saved, information to be accessed, stored, transmitted. Faster, bigger, better. Flawlessly.

CHALLENGES

People around the world are expected to make 726 billion transactions using digital payment technologies by 2020, according to a study released in 2017 by consultancy company Capgemini and bank BNP Paribas.

How many? Probably as many as the sand particles on the beach where Joe Woodland thought about the barcode concept for the first time. It's been a long journey since that day, and this progress and expansion of banking instruments, for business and individuals, in a secure environment, would not have been possible without the combination of barcode technology with computer and application software.

The evolution of the banking system aș we know it, from credit loans to transactions, SWIFT code systems would have been different or even impossible without it.

Solution: ByteScout PDF Extractor SDK and Invoice Parser SDK

DATA CLASSIFICATION

- ByteScout PDF Extractor SDK is used to search and index electronic and scanned documents, turn scanned documents into searchable PDF documents, repair damaged and malformed pdf files.

- ByteScout Invoice Parser SDK is used to automatically classify large amounts of incoming invoices by vendors.
