

LIFE SAVING SOLUTIONS FOR YOUR BUSINESS

We face challenges every day: more and more data, numbers, images to be stored, organized, archived, searched, protected. Samples to be processed, lives to be saved, information to be accessed, stored, transmitted. Faster, bigger, better. Flawlessly.

CHALLENGES

As a student about 20 years ago, I remember that documenting papers in the library requested many hours of search. And this before even getting the book itself. Sometimes the information on those library book cards was misleading or insufficient, the books were not in the right place and they arrived to you after a long waiting time. And sometimes it was not what you expected and the process had to be rerun.

But a university has much more challenges than granting access to library books. Most of the times, it is about working with different types of data, interrelated: information about the students, files, papers, grades, courses attended, payments.

Apart from this, let's not forget that so many tragedies showed that universities could be dangerous places, and controlled access means saving lives. The versatile barcode is helpful one more time.

Solution: PDF Extractor SDK

ACADEMIC RESEARCH

ByteScout PDF Extractor SDK is used in academic research projects to save time on automated data extraction from unstructured sources such as reports, tables, scanned reports, pdf files, printed datasheets. Also built-in search and indexing functionality helps to locate data inside tables, reports, invoices, statements. Generated output is in structured JSON, XML, CSV which are widely supported by scientific software.
